READ YOUR GAMSAT RESULTS

Section scores first. Overall score next. Percentile for context — not an admissions guarantee.

- [ ] **Find all three section scores**
  Read Section I, Section II and Section III separately. Check current minimums for each target university.

- [ ] **Find the overall score**
  The standard ACER overall score double-weights Section III: (I + II + 2 × III) ÷ 4.

- [ ] **Remember: scaled is not percentage correct**
  The reported scores are scaled from 0 to 100. ACER does not provide your raw scores.

- [ ] **Check the university's method**
  Some schools use an unweighted average or section ranking. Confirm current school and GEMSAS rules.

- [ ] **Use the percentile chart as context**
  Read the chart for your own sitting. It compares your overall score with that cohort; it is not the admissions score.

- [ ] **Save the report and check validity**
  Keep your Statement of Results and check the accepted sittings for each application cycle.

> Your displayed section scores are rounded. You cannot exactly recreate ACER's overall calculation from them. A minimum threshold is not a guaranteed interview or offer.
