# SECTION 3:
# FIND THE ERROR CAUSE.

Review the reasoning step you missed — not just the science topic. Use one log for a question or a shared-stem set.

**Date / set / question reference**

**Subject or topic**

**My chosen option**

**Credited option**

**What did the stem ask me to do?**

**Error cause**
Assumed knowledge / data interpretation / reasoning / timing.

**The graph, unit, relationship or evidence I missed**
Explain why the credited option is supported and my chosen option is not.

**Reasoning route to use next time**

**Next drill / revisit note**

Separate science gaps from interpretation and timing failures. The live page recommends reviewing mistakes by cause rather than by subject alone.
